## Motivation

Delhi's vibrant cultural landscape hosts numerous events daily, yet many fail to reach their full potential due to limited visibility. For residents in peripheral areas like NIT Delhi, the conventional approach of physically exploring central Delhi for restaurants and events is impractical and inefficient.

The current digital ecosystem compounds this challenge through fragmentation. Potential attendees must navigate multiple platforms—Google searches, Eventbrite listings, and specialized websites—creating a cumbersome discovery process that often results in missed opportunities for both organizers and participants.

LOCOMO addresses these challenges by consolidating dispersed information into a single, intuitive platform. Our application bridges the geographical divide between Delhi's outskirts and its cultural core, providing comprehensive details on events including precise location data, descriptions, schedules, and logistical information.

Through this unified approach, we enable events to achieve greater attendance while allowing residents throughout the Delhi NCR region to effortlessly engage with the city's offerings regardless of their physical location. LOCOMO transforms how urban experiences are discovered, making Delhi's cultural richness more accessible to all.

### Problem Statement:

Despite Delhi's rich and diverse cultural scene, event discovery remains inefficient and fragmented, especially for residents in peripheral areas such as NIT Delhi. The absence of a centralized platform forces users to rely on multiple sources—ranging from web searches to event-specific websites—leading to missed opportunities and under-attended events. This geographical and digital disconnect limits access to the city's cultural and social experiences. There is a need for an integrated, user-friendly application that consolidates event information and makes urban engagement seamless, regardless of one's location within the Delhi NCR region.

# Introduction

The LOCOMO (Local Commuter) App is a modern mobile application designed to provide users with a comprehensive solution for local food delivery services. This report details the development process, requirements, implementation, and future scope of the LOCOMO App. Developed primarily using TypeScript with supporting technologies such as Kotlin, JavaScript, and Python, LOCOMO aims to create a seamless experience for users looking to order food from local restaurants.

## About app development

App development is the process of creating software applications for mobile devices such as smartphones and tablets. Modern app development encompasses various stages including ideation, planning, design, development, testing, deployment, and maintenance. With the rise of smartphones and mobile technology, app development has become a crucial field in software engineering.

The process typically involves:

Requirement Analysis: Understanding user needs and defining functionalities

Design Phase: Creating wireframes, mockups, and user interfaces

Development: Coding and implementing the application's features

Testing: Ensuring the application works correctly across different devices

Deployment: Releasing the application to app stores

Maintenance: Ongoing updates and improvements

For LOCOMO App, we followed industry best practices and utilized modern frameworks to develop a robust and user-friendly application.

## About Locomo app

LOCOMO (Local Commuter) is a food delivery application that connects users with local restaurants, allowing them to browse menus, place orders, track deliveries, and manage their food preferences. The app is designed to provide a convenient and efficient way for users to access food from their favorite local establishments.

Key features of the LOCOMO App include:

- User authentication and profile management
- Restaurant discovery and menu browsing
- Order placement and tracking
- Payment integration
- Delivery status tracking
- Ratings and review system

Personalized recommendations based on user preferences

The app is primarily developed using TypeScript (.tsx), with additional components in JavaScript, and Python suggesting a cross-platform approach with a focus on mobile applications.

## Feasible Study

### Technical Feasibility

The LOCOMO App utilizes modern technologies widely supported across devices, making it technically feasible to develop and maintain. TypeScript as the primary language offers strong typing and modern JavaScript features, while Kotlin support enables native Android functionalities.

### Economic Feasibility

The food delivery market continues to grow, with a projected annual growth rate of approximately 10% through 2025. Initial development costs can be offset through commission-based revenue models from participating restaurants, delivery fees, and potential premium subscription services.

### Operational Feasibility

The application requires minimal training for users as it follows common patterns in food delivery applications. For restaurants, a simple onboarding process ensures they can quickly join the platform and begin receiving orders.

### Schedule Feasibility

The development timeline was structured into manageable phases, allowing for concurrent development of core features while maintaining quality control. The modular architecture enables feature additions without disrupting existing functionality.

## Existing Study

Current market analysis reveals several established players in the food delivery space:

Zomato: One of the leading platforms with extensive coverage across districts. Zomato's district-based approach allows them to optimize delivery routes and provide localized offerings. Their model involves:

- District-specific restaurant listings

- Localized promotions and deals

- Optimized delivery zones by district

- District-based performance metrics

Swiggy: Offers real-time order tracking and scheduled deliveries.

UberEats: Leverages Uber's existing network for efficient delivery.

DoorDash: Known for their subscription model offering free deliveries.

LOCOMO differentiates itself through:

- A stronger focus on truly local establishments

- More transparent delivery fee structure

- Enhanced order tracking capabilities

- Community-driven restaurant recommendations

- Integration with local public transport information

## Software Requirement Specification

### Functional Requirements

1. User Management
2. User registration and authentication
3. Profile management
4. Address management
5. Order history tracking
6. Restaurant Management
7. Restaurant registration and verification
8. Menu and pricing management
9. Order receipt and processing
10. Analytics and reporting
11. Order Management

12. Menu browsing and item selection
13. Cart management
14. Order placement and confirmation
15. Payment processing
16. Order tracking
17. Delivery Management
  
18. Delivery personnel assignment
19. Route optimization
20. Real-time tracking
21. Delivery confirmation
22. Rating and Review System
  
23. Restaurant ratings and reviews
24. Food item ratings
25. Delivery experience ratings
26. Non-Functional Requirements

## **Performance**

Response time under 2 seconds for all user interactions

Support for up to 1000 concurrent users

Efficient data loading and caching mechanisms

Security

Secure user authentication

Payment information encryption

Data privacy protection

Protection against common vulnerabilities

Usability

Intuitive user interface

Accessibility features

Multi-language support

Dark mode support

Reliability

99.9% uptime

Graceful error handling

Data backup and recovery mechanisms

Compatibility

Support for Android and iOS platforms

Responsive design for various screen sizes

Compatibility with older OS versions (within reason)

# Features

The LOCOMO app is designed to bridge the gap between Delhi's peripheral residents and its vibrant cultural and culinary scene. It offers a comprehensive set of features aimed at enhancing the user experience, ensuring reliable delivery, and supporting local businesses. Below are the key features of the application:

## 1. User Authentication and Profile Management

- Secure login and registration
- Password recovery functionality
- User profile customization
- Address and contact information management
- Saving favourite spots/events in profile section

## 2. Restaurant Discovery

- Location-based restaurant listing
- Featured and trending restaurant sections

## 3. Ratings and Reviews

- Post-order feedback system for food, restaurant, and delivery
- View public ratings and reviews while browsing
- Verified reviews to ensure authenticity

## 4. Location based Event and Spots Discovery

- Google Maps integration for accurate navigation
- Firebase real-time database and authentication

# Project components

## Frontend Components

- Authentication screens (Login, Register, Password Recovery)
- Home screen with restaurant listings
- Restaurant detail pages
- User profile management

## Backend Components

- User authentication service
  - Restaurant management service
  - Order processing service
  - Payment gateway integration
  - Notification service
  - Analytics service
  - Database Components
- 
- User data storage
  - Restaurant and menu data
  - Order information
  - Payment records
  - Ratings and reviews

## Integration Components

- Maps and location services
- Payment gateway services
- SMS and email notification services
- Push notification services

# Project planning

## **Phase 1: Initial Planning and Design (2 weeks)**

- Requirement gathering and analysis
- Market research
- UI/UX design
- Architecture planning

## **Phase 2: Core Development (8 weeks)**

- User authentication implementation
- Restaurant listing functionality
- Menu browsing and cart management
- Basic order placement

## **Phase 3: Advanced Features (6 weeks)**

- Payment gateway integration
- Order tracking system
- Rating and review system
- Admin dashboard

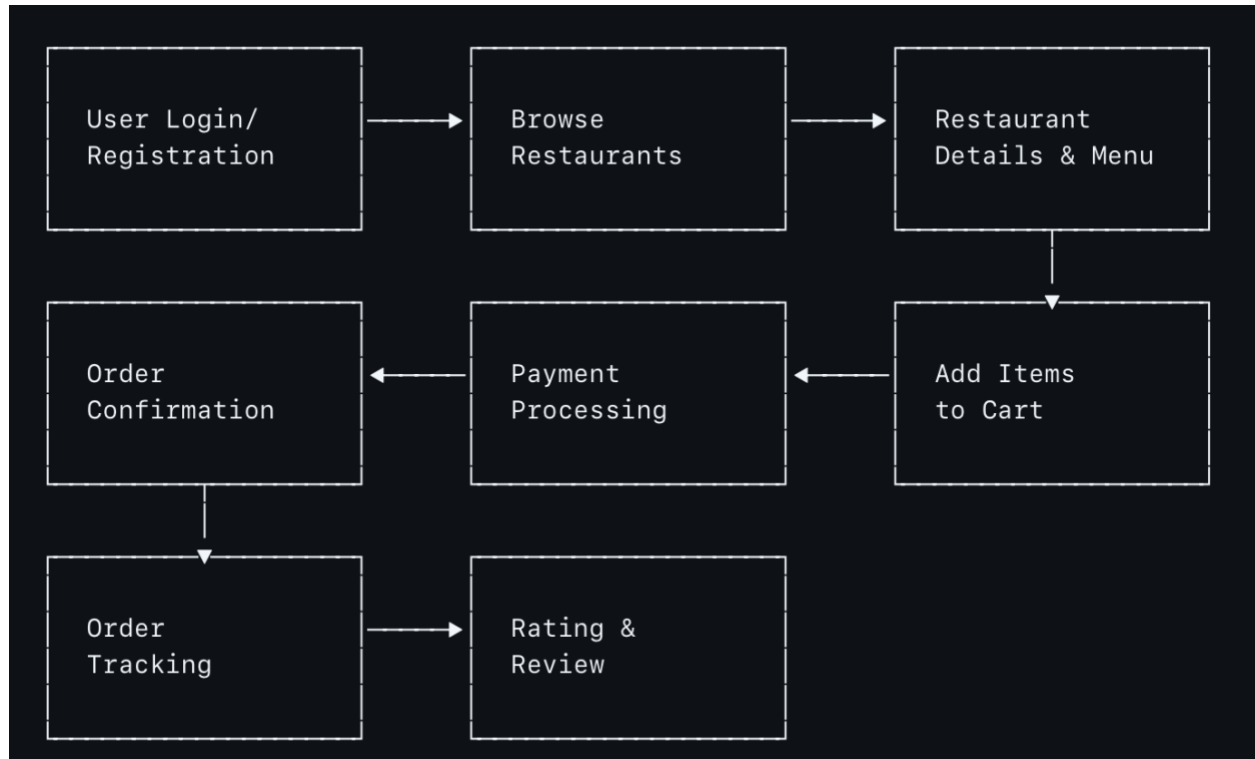

## **Phase 4: Testing and Optimization (4 weeks)**

- Unit and integration testing
- Performance optimization
- Security testing
- User acceptance testing

## **Phase 5: Deployment and Launch (2 weeks)**

- App store submission
- Pre-launch marketing
- Initial restaurant onboarding
- Launch monitoring

## Flow of Project

## Implementation

### Technology Stack

#### Frontend:

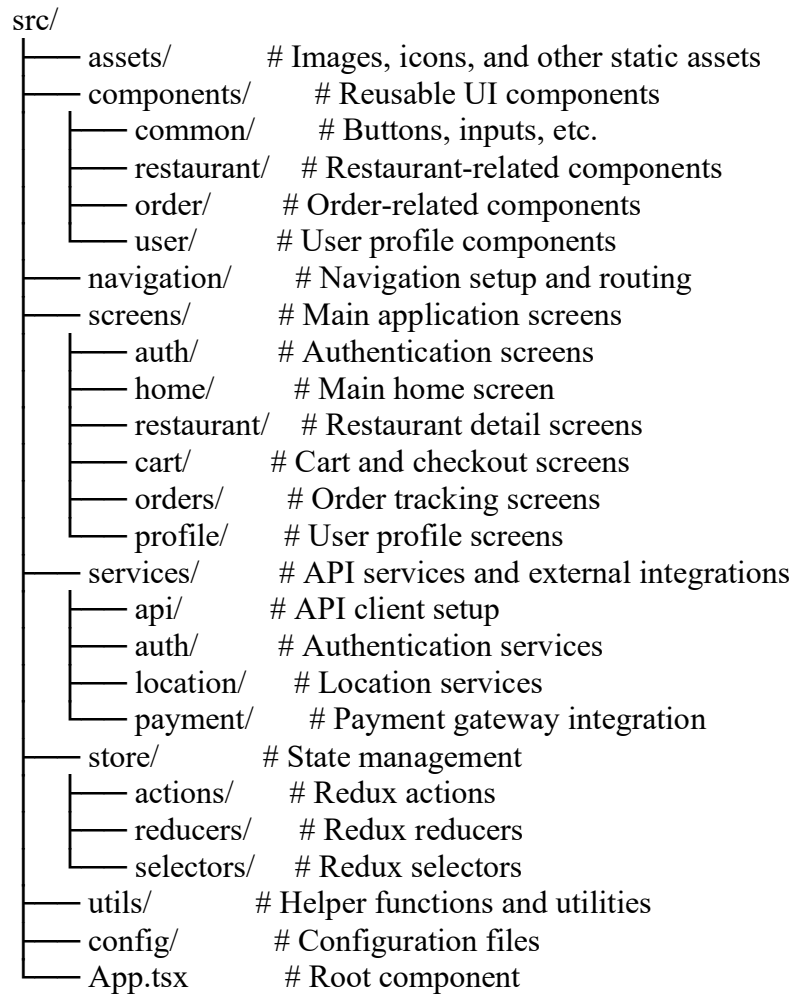

React Native with TypeScript for cross-platform mobile development  
Redux for state management  
Styled Components for styling  
React Navigation for navigation

#### Backend:

Node.js with Express for API development  
MongoDB for database  
Firebase for real-time features and authentication  
AWS for hosting and infrastructure  
Other Tools and Services:

Google Maps API for location services  
Stripe/Razorpay for payment processing  
Sentry for error tracking  
Jest for testing

# Project structure

# Proposed System

The LOCOMO App aims to create a more streamlined and user-friendly experience compared to existing solutions:

## Key Innovations

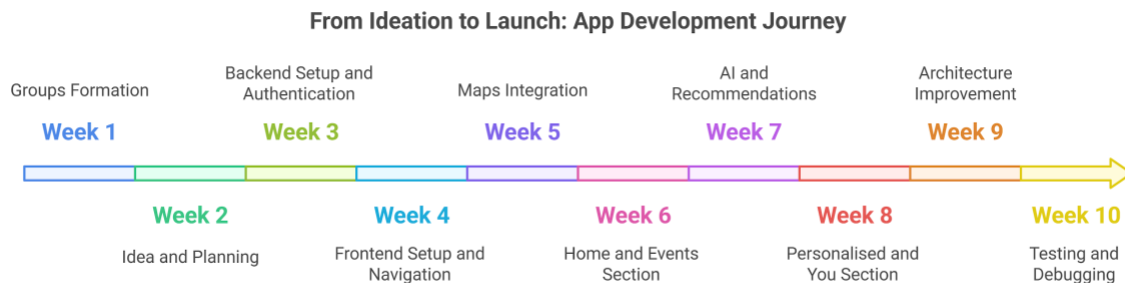

**Smart Order Routing:** Using machine learning to predict the optimal restaurant based on preparation time, delivery distance, and rider availability to minimize delivery times.

**Personalized Recommendations:** Learning user preferences over time to suggest relevant restaurants and dishes, improving user satisfaction and order frequency.

**Transparent Pricing:** Clearly breaking down delivery fees, service charges, and taxes to build trust with users.

**Community Features:** Allowing users to share recommendations, create group orders, and discover trending restaurants in their area.

**Sustainability Focus:** Options for eco-friendly packaging and carbon-offset deliveries to appeal to environmentally conscious users.

## Conclusion

The LOCOMO App has been meticulously designed as a comprehensive event and restaurant discovery platform, prioritizing user experience, performance, and scalability. By leveraging modern technologies and adhering to industry best practices, LOCOMO delivers a robust and seamless solution for connecting users with local restaurants and events.

### Key Achievements:

- Cross-Platform Compatibility: Developed a versatile application that functions flawlessly on both Android and iOS platforms.
- Real-Time Order Tracking: Enabled precise and transparent tracking of orders to enhance user trust and satisfaction.
- Intuitive User Interface: Designed a user-friendly interface to ensure effortless navigation and usability.
- Secure Payment Integration: Incorporated robust payment processing systems to ensure secure and reliable transactions.
- Scalable Backend Architecture: Implemented a backend capable of handling high concurrency, ensuring stability during peak loads.

## Future Scope

### AI-Powered Features:

Implementing machine learning algorithms for personalized recommendations

Predictive order suggestions based on user habits

Intelligent delivery route optimization

Expanded Services:

Voice ordering capabilities

Augmented reality menu visualization

Social media integration for sharing and recommendations

Business Expansion:

Geographic expansion to more cities and regions

Additional restaurant partnerships

Corporate ordering programs

Technical Enhancements:

Offline functionality for menu browsing

Advanced analytics for user behavior

Further optimization for performance and battery usage
